Loan Default Prediction Project Steps:

1. Project Introduction

2. Import Libraries

3. Load Dataset

4. Data Overview

5. Data Cleaning

6. Exploratory Data Analysis

7. Missing Value Treatment

8. Outlier Treatment

9. Feature Encoding

10. Feature Scaling

11. Train-Test Split

12. Logistic Regression

13. Random Forest

14. XGBoost

15. Baseline Comparison

16. Hyperparameter Tuning

17. Tuned Model Comparison

18. Final Model Selection

19. SHAP Explainability

20. Business Recommendations

21. Conclusion

Notebook now covers the complete lifecycle of a professional credit risk modeling project:

- Project Introduction
- Data Overview and Cleaning
- Exploratory Data Analysis
- Missing Value and Outlier Treatment
- Feature Encoding and Scaling
- Train-Test Split
- Baseline Models
- Hyperparameter Tuning
- Model Comparison
- SHAP Explainability
- Business Recommendations
- Conclusion
